

The figure displays the convergence of four metrics over time. The 'Energy' and 'Prior' metrics start at high values (approximately 55 and 50 respectively) and decrease rapidly, following a similar exponential-like decay curve, reaching near-zero values by time 0.07. The 'Fidelity' metric starts at a low value (approximately 0.005) and increases very slowly, reaching approximately 0.01 by time 0.07. The 'Mass' metric remains constant at a low value (approximately 0.005) throughout the entire time range.

time	Energy	Prior	Fidelity	Mass
0.00	55	50	0.005	0.005
0.02	15	12	0.006	0.005
0.04	5	4	0.008	0.005
0.06	2	1	0.010	0.005
0.07	1	0.5	0.011	0.005
